'classical field theory

May 31st, 2020 - a classical field theory is a physical theory that predicts how one or more physical fields interact with matter through field equations the term classical field theory is monly reserved for describing those physical theories

that describe electromagnetism and gravitation two of the fundamental forces of nature theories that incorporate quantum mechanics are called quantum field theories'

'covariant formulation of classical electromagnetism

October 7th, 2019 - the covariant formulation of classical electromagnetism

refers to ways of writing the laws of classical electromagnetism in particular maxwell's equations and the lorentz force in a form that is manifestly invariant under lorentz transformations in the formalism of special relativity using rectilinear inertial coordinate systems these expressions both make it simple to prove that the laws" **1136 cambridge**

'*covariant classical field theory*

June 5th, 2020 - in mathematical physics

covariant classical field theory represents classical fields by sections of fiber bundles and their dynamics is phrased in the context of a finite dimensional space of fields nowadays it is well known that citation needed jet bundles and the variational bicomplex are the correct domain for such a description the hamiltonian variant of covariant classical field
